## 1. Database Setup:

• Open the mongoDB compass

Create a new MongoDB database: myDatabase

#### 2. Collection Creation:

Create a collection within database: users

### 3. Document Insertion:

- Insert five documents into the users collection, each representing a user with fields such as name, email, and age.
- Before inserting into collection "use db" command to switch the current database context within MongoDB.

• db.users.insertMany() method is used to insert the documents into users collection as shown below.

## 4. Queries to retrieve:

To retrieve all the users from the users collection. o
 db.users.find({ });

```

• To retrieve the specific users with an age greater than or equal to 22

```
o db.users.find({ age: { $gte: 22 } });
```

```
> db.users.find([age:{Sgte:22}]);

{
    _id: ObjectId('65fdcas4!e25bd28f7b29ab7'),
    name: 'kintaeyung',
    email: 'btsv@gmail.com',
    age: 24
}

{
    _id: ObjectId('65fdcas4!e25bd28f7b29ab8'),
    name: 'yangyang',
    email: 'yang@gmail.com',
    age: 25
}

{
    _id: ObjectId('65fdcas4!e25bd28f7b29ab9'),
    name: 'bie',
    email: 'bie',
    email: 'bie@gmail.com',
    age: 24
}
```

## 5. Update Operation:

- To update the age of a user with a specific email address in MongoDB, use the updateOne() method.
- Example:

```
> db.users.updateOne(
    { email:"sure24@gmail.com"},
    { $set: { age: 22}}
);

<{ {
    acknowledged: true,
    insertedId: null,
    matchedCount: 1,
    modifiedCount: 1,
    upsertedCount: 0
}</pre>
```

## 6. Deletion Operation:

• To delete the user document based on a specific email address in MongoDB, you can use the deleteOne() method.

```
o db.users.deleteOne({email:yangyang@gmail.com});
```

```
> db.users.deleteOne({ email:"yangyang@gmail.com"});

< {
    acknowledged: true,
    deletedCount: 0
}</pre>
```

#### 7. Index Creation:

☐ To create an index on the email field of the users collection in MongoDB, use the db.users.createIndex() method.

o db.users.createIndex({ email: 1});

#### **Final Outcome:**
